

TECHNICAL DATA SHEET

Twin Bucket String Mop Trolley

DESCRIPTION

The Cleanroom Twin Bucket flat mop is ideal for those who want a mopping system that is optimised for use with Micro-Fibre or Knitted Polyester "String" type mops. The trolley is supplied with two easy to remove buckets, this allows you to keep dirty water separate from clean water. The blue handle bucket for clean water is 22 Litre and the Red handle bucket is 22 Litres in capacity. The wringer efficiently squeezes the mop head and excess `dirty' water falls into the red bucket. Built around a durable modular system, the Mopping Trolley can easily be customised to suit your needs, or adapted to meet new demands.
